Objective

A driven computer engineering student in pursuit of an entry-level position that will allow me to leverage my hands-on experience in software development and basic advanced programming skills to drive technological advancements, contribute to innovative projects, and foster team success in a dynamic environment.

Education

Polytechnic University of the Philippines (PUP) – Manila

Bachelor of Science in Computer Engineering (BSCPE) | 2022 – Present (Batch 2026)

Metro Manila College

Senior High School (STEM Strand) | 2022 – 2022

Experience

Network Associate Intern

Nexus Cloud I.T. Solutions | Ortigas Center, Pasig, Philippines | July 2024 – September 2024

- Learned to configure networks with actual CISCO switches and routers
- Manage to create a server and learn Windows Server using PowerShell.

Web Developer Intern

Department of Science and Technology (DOST) | Bicutan, Taguig, Philippines | July 2025 – September 2025

- Explore the Laravel Framework and apply it in web development using their General Maintenance Management System.
- Practiced basic database management with the help of Laravel, WAMP server, and basics of SQL.
- Improved the UI/UX of the website with the help of bootstrap. Maintaining the interactivity of the website.

Projects

- **Embedded Sound Therapy Device:** An integrated hardware and software thesis project engineered to improve sleep quality. The physical device features custom, precisely dimensionally accurate 3D casings modeled in AutoCAD. It pairs seamlessly with a custom mobile application that tracks users' sleep data while offering targeted audio therapy through curated categories like classical music, nature sounds, and binaural beats.
- **KUMPAS: Camera-based Proximity Controlled Music Synthesizer:** Developed a Python-based virtual piano application utilizing computer vision and real-time hand tracking to translate physical gestures into musical synthesis.
- **COVID Contract Tracing Software:** Developed a Python desktop application for COVID-19 contact tracing, utilizing local CSV storage for user health data and featuring a search function for registration verification.

Skills

Programming Skills: HTML, CSS, JavaScript, Python, C, C++, C#, Laravel, Flutter, SQL

Technical Skills: Word, Excel, PowerPoint, Tableau, AutoCAD, Blender, Unity, Visual Studio Code

Soft Skills:

- Adaptable
- Highly Organized
- Effective multi-tasker
- Capable of performing under pressure
- Willingness to learn
